

MailMax: Advanced Email Bulk Sender

MailMax is a windows application that helps you to send bulk emails with advanced options, with MailMax you can import your emails from Text or CSV files, Create Your Message with/without attachment, Manage Your SMTP Server + SMTP Tester(a useful tool to test your server before start sending), Send multiple campaigns with different SMTP Server, Get a full report of sending.

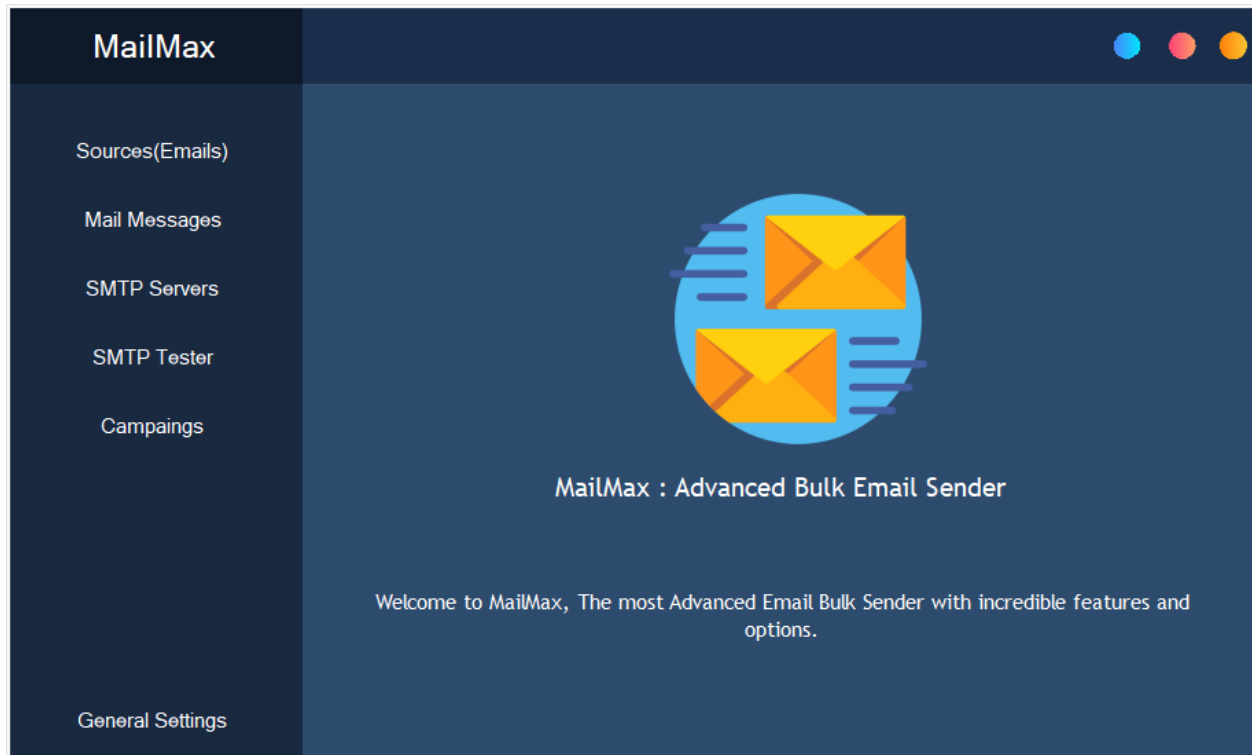

MailMax allows you also to use the SMTP Rotation which gives you the right to send emails from the same campaign with different servers.

MailMax helps you also with a smart verification of emails before sending, you can activate or deactivate this option from the settings, this option verify the domain of the email if it exists will send the email, if not will exclude it.

MailMax gives you the right to define the seconds to wait after every email sent, and even wait X seconds after every X email sent, you can put 0 to send maximum as possible.

[How To Use MailMax and Send Your First Campaign](#)

Unzip the main file, from folder Release run **MailMax.exe**:

Steps To Follow To Send Your First Campaign are :

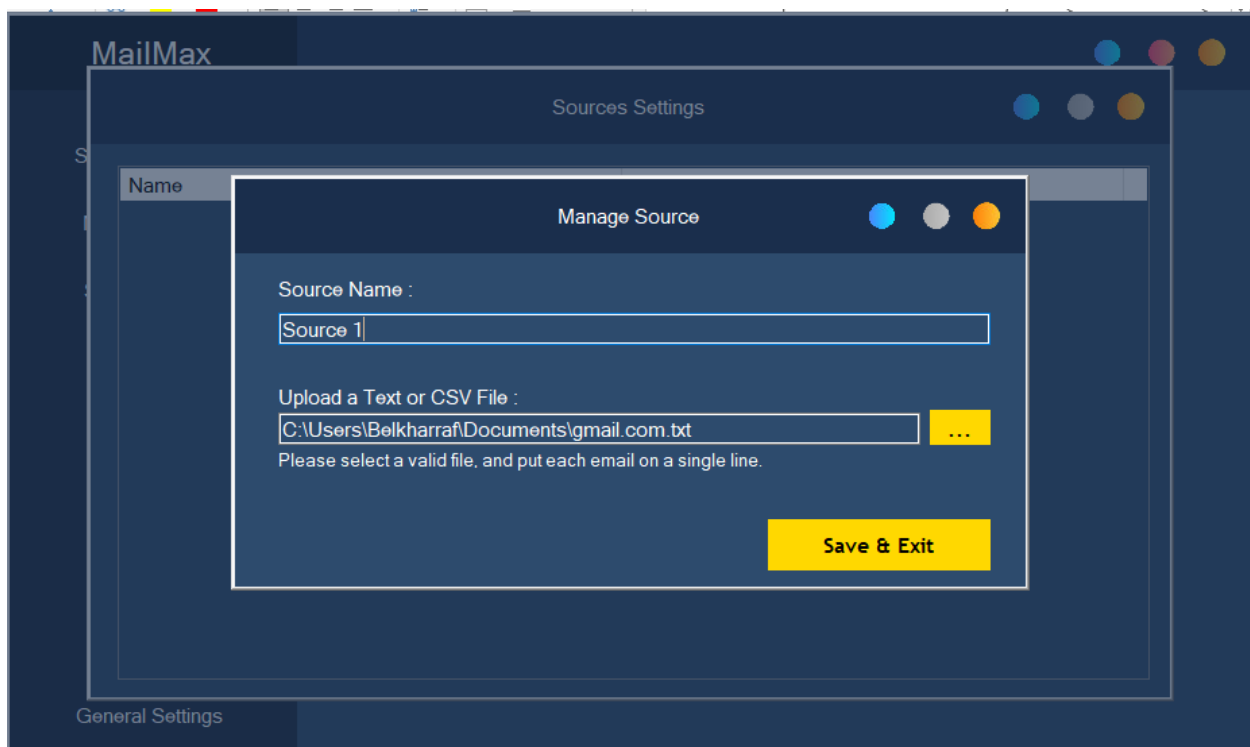

1. Add The Emails(Sources)
2. Add Your Mail Message(Plain Text or HTML)
3. Setup Your SMTP Server(s) or Test it before by using SMTP Tester Tool
4. Add Your Campaign

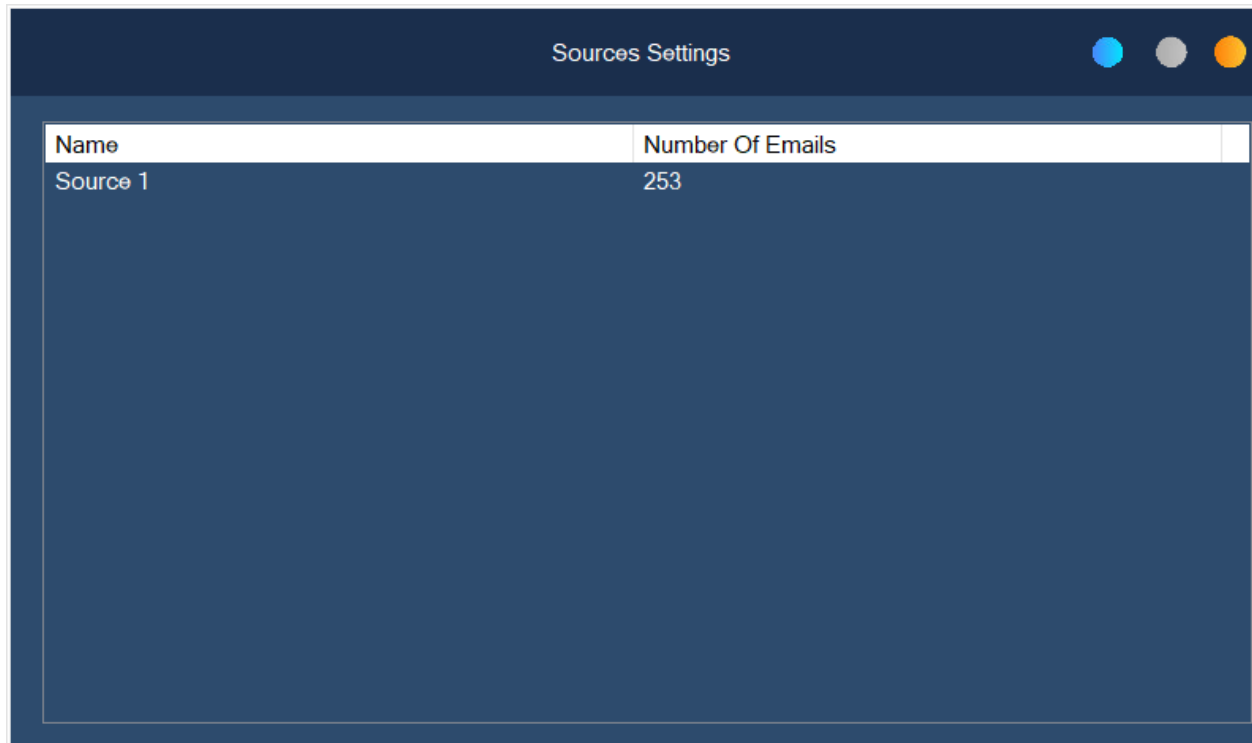

Let's Start with First Step=> Add The Sources

From the Left Menu Click **Sources** and click **Add new Source**:

Select You're a file contains all emails, each email at line :
